

The qualified instrument emerged through falsifiable gates
Failure / insufficient evidence, calibration, and replication remain distinct

GATE	METHOD CHANGE	FROZEN RESULT	STATUS
 Gate 4 N=50	One-shot L17 ± sign + random	No detectable semantic movement	Failure
 Gate 5 N=60	Isolate duration: one-shot vs sustained	Duration contrast; primary movement below threshold	Failure
 Gates 6-6.3 N=60	Source/readout split; paired-mean L27	Strong DEVELOPMENT signal; historical safety issue	Development
 Gate 7 N=120	Fresh full-dose replication	Movement replicated; validity cost	Failure
 Gate 8 N=50	Prospective label-free calibration	D75 selected; not by accuracy, G, C, or D	Calibration
 Gate 9 N=100	Fresh selected-dose DEVELOPMENT test	Strong safe DEVELOPMENT replication	Replication
